Paediatric Critical Care CME and Workshop on Blood Gases

September 24-25, 2011

Organised by

Department of Critical Care Medicine

Sanjay Gandhi Postgraduate Institute of
Medical Sciences, Lucknow

Invitation

Dear friends,

It gives us pleasure to invite you for the CME on 'Critical care: Paediatric considerations' and workshop on blood gases organized by the department of Critical Care Medicine, SGPGIMS, Lucknow.

Children are unique in their critical care needs. While they are more vulnerable to decompensate following an illness, they respond rapidly to resuscitation and have good outcomes with intensive care. The spectrum of illnesses, their manifestations and the management strategies are different and hence it can be rightly said 'children are not small adults'. This CME would focus on the various common aspects of paediatric critical care including CPR, fluid therapy, neurocritical care, diabetic ketoacidosis, respiratory failure, weaning, nutrition and antibiotic use. Apart from being useful for paediatric trainees, especially those in paediatric critical care, it would also allay the fears of an adult intensivist who may be called upon to look after a child in the ICU. The faculty for the CME includes the best teachers in paediatric critical care from India and the father of paediatric critical care, Prof. Frank Shann from the PICU at the Royal Children's Hospital, Melbourne.

Following this will be a one day workshop on blood gas analysis. Appropriate interpretation of blood gases is a must for good quality intensive care. Didactic lectures on the different facets of blood gas will be followed by small group discussions dealing with case scenarios where different types of blood gas disturbances would be analysed based on the approach discussed in the lectures. Enrollment is limited to 50 seats for the workshop.

We look forward to seeing you in Lucknow in September

Organising Chairman
Prof. AK Baronia

Critical Care: Paediatric Considerations

September 24, 2011 (Saturday)

Venue: Telemedicine Auditorium

Session 1:

CPR: new guidelines – incorporating the changes

L.N.Taneja

Maintenance IV fluids in children – Why, what, when and at what rate?

Jayashree M

Fluid resuscitation in a) Dengue shock syndrome
b) Septic shock

Rakesh Lodha

Session 2:

DKA-preventing secondary injury

Vijayalakshmi Bhatia

Neuroprotection in non-traumatic coma
(without ICP monitoring)

Sunit Singh

Antibiotics in the ICU

Frank Shann

Session 3:

Approach to a wheezing child in the ER

Yogesh Govil

Weaning and extubation

Soonu Udani

Panel discussion: Nutrition – route, rate, type and targets

Moderator : Banani Poddar

Workshop on Blood Gases

September 25, 2011 (Sunday)

Venue: Lecture Theatre, Dept. of CCM

Didactic Lectures

Sampling for Blood Gases

Basic Biochemistry of Blood Gases

Oxygenation

Alveolar Ventilation

Acid-Base & Electrolytes

Blood Gas Interpretation-Stepwise approach

Four Stations by rotation : Case Discussions

Metabolic Acidosis

Metabolic Alkalosis

Respiratory Acidosis

Respiratory Alkalosis

Registration

Paediatric Critical Care CME and Workshop on Blood Gases

September 24-25, 2011

Name _____

Designation _____

Institution _____

Address for correspondence _____

Phone No. (Landline & Mobile) _____

E Mail _____

Accommodation Required : Yes / No

If Yes, No. of days :

Date and time of arrival and departure :

Registration

CME Alone Rs.1000/-

CME+ Workshop Rs.1800/-*
(50 Registrations only for workshop)

Accommodation (Available on a twin sharing basis) Rs.350/-
Day/Person

Total amount due :

Draft No. & Date :

Note: Draft to be made in favour of "Paediatric CME-2011" payable at Lucknow.

Signature

*CME registration compulsory for workshop participants
